(f) Spatial enrichment and cluster summary

radius	observed	expected	p
≤250 m	31	9.6	5.8×10^{-12}
≤500 m	34	15.8	3.7×10^{-8}
≤750 m	36	21.4	1.5×10^{-5}

31/53 candidate identities are within 250 m of confirmed compounds.
The imagery panels show the four primary site-confined clusters; proximity is associative, not attributional.
