

1 Strong fixed GNSS-like displacement — two examples

Petushki / Shatura
32 km · 9 cells

○ source ★ common destination · Basemap © OpenStreetMap contributors, © CARTO

Queen Alia area
33 km · 157 cells

2 Suggestive fixed displacement — three examples

Azov / Rostov
38 km · 21 cells

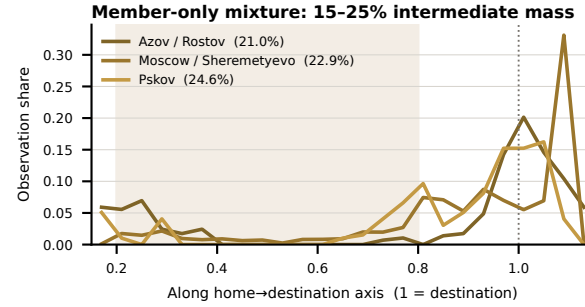

Moscow / Sheremetyevo
26 km · 22 cells

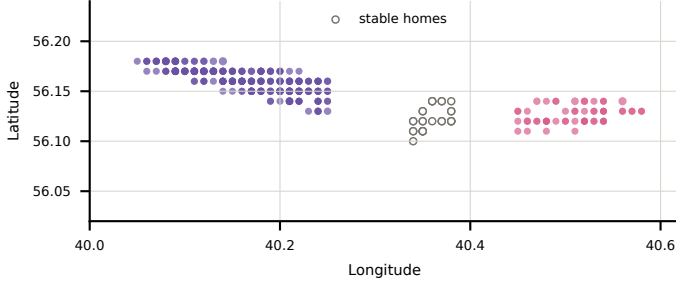

Pskov
35 km · 10 cells

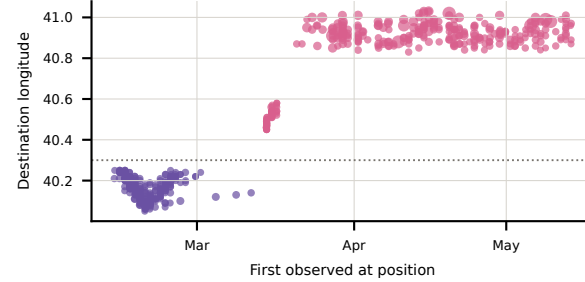

○ source ★ common destination · Basemap © OpenStreetMap contributors, © CARTO

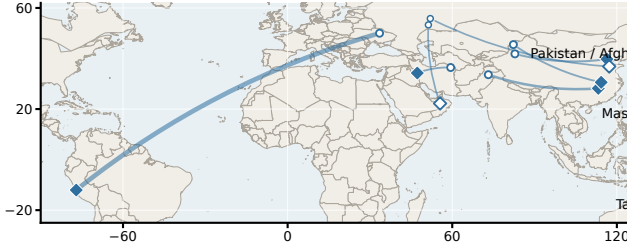

3 Multiple destinations — shared cells, opposite bearings

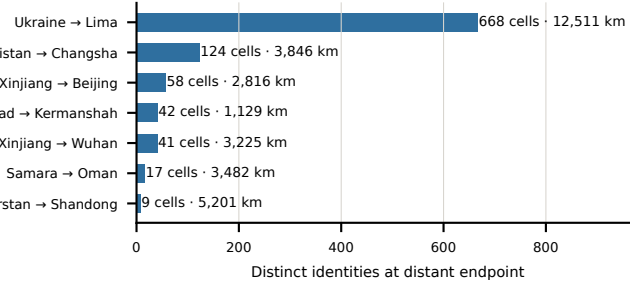

West ends in March; east begins two days later

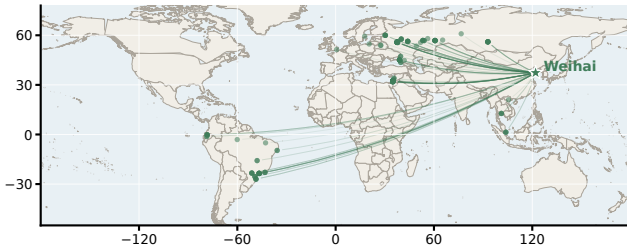

4 Identity replay — stable homes plus distant clones

Five large clusters + two smaller onset sets

5 Bulk rebroadcast — 157 identities from 11 MCCs

MCC composition at the exact Weihei point
